Year 1 Term 3 Science – Humans

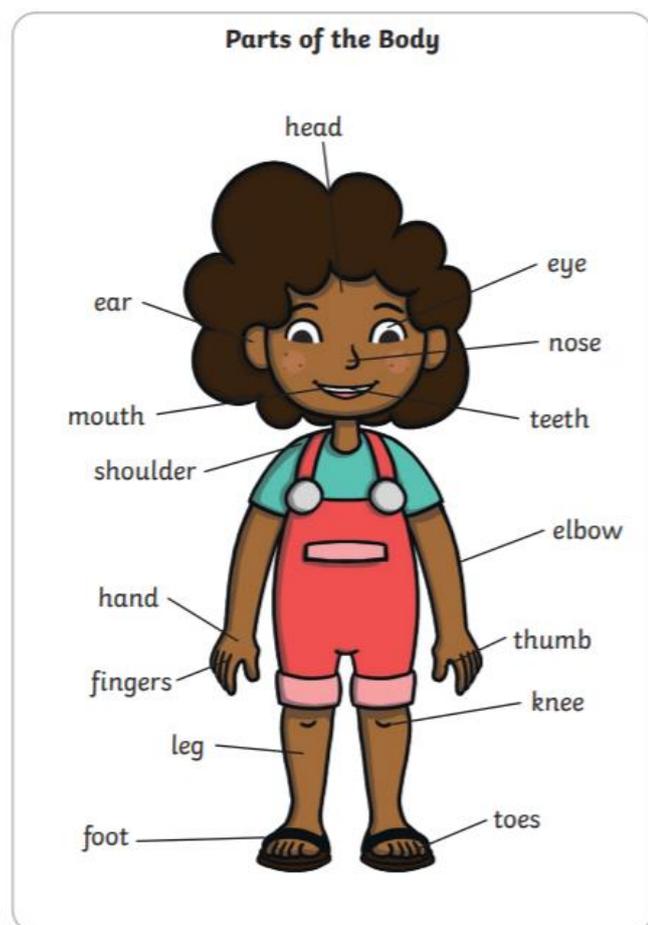

In this unit of work we will name, draw and label the basic parts of the human body and say which part of the body is associated with each sense.

Humans have key parts in common, but these vary from person to person. Humans find out about the world using their senses.

Humans have five senses – sight, touch, taste, hearing and smelling. These senses are linked to different parts of the body.

Although we often use our fingers and hands to feel objects, we can also feel with many parts of our body.

| Key Vocabulary | |
|----------------|---|
| sight | Your eyes let you see all the things around you. |
| hearing | Your ears let you listen to all the things around you. Your brain is able to tell what different sounds are. |
| touch | Your skin gives you the sense of touch. You can tell if something is warm, cold, smooth or rough without even looking at it! |
| taste | Your sense of taste comes from your tongue. You can tell if something tastes bitter or sweet. You might have some tastes you like and some you don't. |
| smell | You smell using your nose. Your nose can tell if things smell nice or not nice. |

Helen Keller was born in Tuscumbia, Alabama, in 1880. When she was only 19 months old, she became ill and the illness left her blind and deaf. When she was almost seven years old, her parents asked Anne Mansfield Sullivan to come and teach her. Miss Sullivan was incredibly dedicated and cared for Helen with patience and love. Miss Sullivan was able to help Helen to learn. Helen Keller quickly learned to read and write, by the age of 10, Helen could speak. When she was 20, Helen began to study at Radcliffe College. Miss Sullivan came to college with Helen so that she could spell all of the text books, letter by letter, onto Helen's hand. Four years later, Helen Keller was awarded her degree. After she graduated, Helen began to work helping blind and deaf-blind people; this became her life's work.
